

End-of-Ownership Strategy

BIFMA e3 5.9.4.1 & 5.9.4.2

Nucraft designs and builds wood furniture to last. The advantage of a natural material like wood is that it provides the option to refinish or refurbish in order to extend the useful life of the product. In addition, many trim and base options can be changed out to provide a renewed aesthetic.

Repurposing Legacy Products

Nucraft's End-of-Ownership Strategy provides customers an environmentally friendly alternative to disposing of their furniture once it has reached its end of life. If you have Nucraft furniture that you no longer want or need, a Customer Service Representative can arrange to have your furniture picked up and delivered to its facilities for repurposing. Nucraft's competitive freight rates help make this an attractive option for customers.

As part of Nucraft's sustainability program, furniture returned under this program will be repurposed with minimal impact on the environment. Detailed information on Nucraft's End-of-Ownership Strategy is available upon request to participating customers.

For an accurate freight quote, contact your Customer Service Representative and provide the original Nucraft order acknowledgement number. If your number is not known, please provide the cubic footage of the assembled product being picked up. Upon acceptance of the quote, you will be contacted by Nucraft's freight carrier to coordinate furniture pickup. Furniture must be staged and loaded onto the freight carrier's trucks by the customer.

Donating Legacy Products

If new product is the right choice for you, Nucraft encourages and supports efforts to avoid disposal of legacy products into landfills. Donating to a local charitable organization is a good way to extend the useful life of furniture. Nucraft is committed to recycling legacy products through its support of ANEW, a non-profit organization dedicated to collecting, organizing and repurposing surplus furniture, fixtures and equipment for donation to the underserved and those who support them. Additional information is available at www.anewfound.org.

Nucraft's strategy is to be innovative within the boundaries of utilizing materials that can be reused or recycled. Below is a guide to the typical materials used on all Nucraft legacy products.

Material	Usage Example	End-of-Ownership Options
Aluminum Cast	Handle	Metal Recycler
Aluminum Extrusion	Table Support Beam, Foot, Base Leg, Overhead Door Frames	Metal Recycler
Steel	Brackets, Hardware, Accent Trim	Metal Recycler
MDF and Veneer	Top (Knife Edge Application)	Fuel for Boilers: Energy Recovery
Particleboard and Veneer	Case, Base Panels, Tops w/ Square Edge	Fuel for Boilers: Energy Recovery
Corrugated Paper	Cartons / Packaging	Corrugated Recycling
Office Paper	Instructions, Labels	Paper Recycling
Glass	Table Top, Casegood Overhead Doors	Glass Recycling
Polyurethane Foam	Cushions	Recycle: Carpet Backing

To learn more about the End-of-Ownership Strategy or to receive a freight quote, contact your Nucraft Customer Service Representative from 8am to 5pm EST, Monday through Friday.
