

NUCRAFT
PERSPECTIVE COLLECTION™

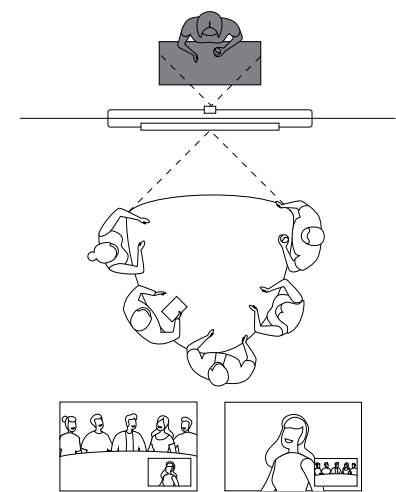

PERSPECTIVE COLLECTION

Designed by Joey Ruiter

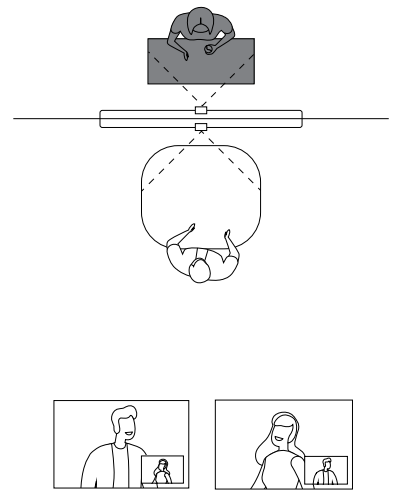

The Perspective Collection is designed for the posture orientation challenges in virtual meetings. The shape of the tables allow remote participants to have a seat at the table, and for in-person users to have sightline views of both the in-person and the remote participants for all to be seen and heard.

ASPECT

Aspect is a combination of a sightline conference table, traditional media table, and a round table. Available in sizes suitable for 4 to 9 people, Aspect’s design solves for technology constraints and supports both virtual and in-person conversations with digital meeting equity.

PORTAL

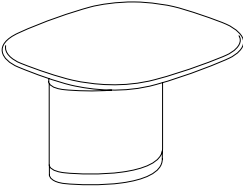

Portal supports small spaces designed for privacy, acoustic control, and access to virtual meeting technology. Portal is meant for 1 to 3 people and offers one-to-one posture while meeting virtually.

DESIGN

The Perspective Collection is designed for the posture orientation challenges in virtual meetings. The shape of the tables allow remote participants to have a seat at the table, and for in-person users to have sightline views of both the in-person and the remote participants for all to be seen and heard.

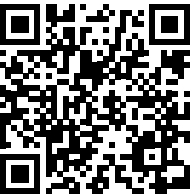

POWER & TECH

The Perspective Collection features a variety of integrated power and AV options, offering both in-top and sub-top connections. Power Options include the robust Power Matrix unit for tailored AV connectivity on the table surface and the Power Shelf for subtop connectivity and discreet device storage. The versatility in power and AV options for the Perspective Collection ensures seamless connection to virtual meetings.

MATERIALS

Offering a broad range of material choices, the Perspective Collections allows for personalization that suits different environments and aesthetics. Top materials including veneer, glass, stone, and laminate can be paired with paint or veneer bases for true design flexibility. The organic curves of the bull-nose edge detail and the table base create harmony in traditionally tech-heavy spaces.
